

Little Weather Reporter

Look at the weather outside and match it with a symbol.

Helps Your Child Grow

Scientific Inquiry

Looking at the sun, clouds, rain, and sky helps your child use visible clues to identify the weather and practice observing, describing, and making a simple record.

Communicating and Speaking

Observing and recording the weather gives your child practice describing discoveries in fuller, more detailed language.

Steps

- Invite your child to be the family weather reporter and record what the sky looks like each day.
- Make a weekly chart with one weather box for each day. Each morning, look outside, add a matching sticker, and ask your child to announce the weather.
- Begin with familiar categories such as sunny, cloudy, and rainy.
- If the sky looks different, observe together. The sun may appear and disappear behind the clouds, prompting the question, “Is it sunny or cloudy?”
- Introduce a “partly cloudy” sticker and explain: “The sun comes out, then hides behind the clouds. That’s partly cloudy.”
- When the weather changes during the day, add another sticker so the chart records both conditions.

Tips

- If you do not have a sticker that matches the day’s weather, invite your child to draw or write what they observed.

Observations

- ☐ Figures out today’s weather by looking outside
- ☐ Describes the weather in detail, such as “The sun is out, so it’s sunny today.”
